DETAILED ACTION
REASON FOR ALLOWANCE

Claims 1-43 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a system for performing a storage management procedure.

The independent claims 1, 21, 41, 42, and 43 have a unique feature of "data transcoding procedure being triggered by said storage manager to begin whenever said available storage space in said storage medium is less than at least one predetermined storage-space threshold value"

Wang, US 6,441,754, discloses a transcoding architecture and a consumer set-top box with storage capability that is based on the transcoding architecture and capable of operating efficiently in an all-digital environment. In a preferred embodiment, a digital-VIDEO DEVICE employs an MPEG-2 compliant transcoder that includes a simplified cascaded decoder and encoder, and is capable of performing determinable bitrate re-encoding without conducting motion estimation. During recording, the decoder receives and processes a compressed source bitstream, producing a decoded bitstream that includes reconstructed video and preserved motion vectors. The encoder "re-encodes" the decoded bitstream using the preserved motion vectors and performs any applicable bitrate modifications.

Fletcher, US 3,694,581, discloses an apparatus for data compression by a decreasing slope threshold test using digital techniques in which the data stream through an input register is examined and only those samples of the raw data are selected for transmission which have a first difference (slope) that exceeds an exponentially decaying threshold function relative to a bias. If a sample is transmitted, it becomes the new bias and a generator of the threshold function is reset. For threshold comparison, the bias is first subtracted from each first difference to produce a second difference for direct comparison of its absolute value with the absolute value of the threshold function, thereby allowing the function generator to run from a constant reference to generate a single sided exponentially decaying function.

None of the prior art, either singularly or in combination, fails to anticipate or render the above underlined limitations obvious. Claims 2-20, 22-40 are depending on independent claims 1, 21 respectively and therefore depending claims are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
